Full Inversion Tillage (FIT) during pasture renewal as a potential management strategy for enhanced carbon sequestration and storage in Irish grassland soils

Volume: 805

Abstract

It has been suggested that the sequestration of CO₂ by grasslands, which are a major source of greenhouse gas (GHG) concentrations and in turn mitigate the impacts of climate change. Carbon sequestration in grasslands, which cover more than 60% of agricultural land use in Ireland, could contribute to a successful net reduction of atmospheric GHG emissions in accordance with the COP21 Paris Agreement. However, current estimates of soil carbon sequestration are variable and it is likely that many permanent grasslands are close to saturation. A literature search shows that soil carbon sequestration is enhanced by a variety of different management strategies, although one option that has only been examined to date in New Zealand is full inversion tillage (FIT) during grassland renovation. FIT involves inverting topsoil, generally to depths of 30 cm, resulting in the movement of C-deficient subsoil to the surface and the burying of carbon-rich topsoil. In this review, we hypothesise that over the next-30 years the new topsoil could incorporate large amounts of soil organic carbon (SOC) from the re-seeded sward vegetation and that the buried carbon will be retained. We assess the current capability of Irish grassland soils to sequester carbon and suggest a potential role of FIT during grassland renovation. An analysis of the distribution of grasslands in Ireland using the Land Parcel Identification System (LPIS) suggests that-26% of Ireland's agricultural grasslands are suitable for FIT. As soils under permanent pasture and grasslands have large topsoil carbon (C) stocks, the scope to sequester additional C may be limited. However, because C in pasture/grassland soils declines with depth, there may be potential to sequester additional C in the subsoil. The growing population in the metropolitan areas in this modern age requires more smart services of transportation. Achieving smart and intelligent transportation requires the use of millions of devices equipped with Internet of things (IoT) technology¹.

On the other hand, graphs are the better way to represent the transportation infrastructure. The use of millions of IoT devices generates a huge volume of data, termed as Big Data, which results in the generation of big graphs².

use of millions of devices equipped with Internet of things (IoT) technology(1).

On the other hand, graphs are the better way to represent the transportation infrastructure. The use of millions of IoT devices generates a huge volume of data, termed as Big Data, which results in the generation of big graphs(2).

The processing of big graphs using current technology while taking the present real-time traffic information in order to generate graphs for real-time decision making is a challenging task(3). Therefore, in this paper, we proposed smart and intelligent transportation based on real-time traffic circumstances using graphs(4).

It supports the municipalities to manage the traffic efficiently and facilitate the travelers' queries anytime, anywhere intelligently based on current traffic scenarios(5).

如何消除文献域代码格式？

The screenshot shows the Microsoft Word interface with the EndNote 21 ribbon selected. The 'Convert Citations and Bibliography' option is highlighted in the ribbon, and its dropdown menu is open, showing 'Convert to Plain Text' as the selected option. A warning dialog box titled 'EndNote 20' is displayed in the foreground, with the following text: 'This document has not yet been saved. It is suggested that you save the document before performing the Remove Field Codes command to retain a copy of the document with the EndNote field codes. Would you like to save the document or continue without saving?'. The dialog box has 'Yes', 'Continue', and 'Cancel' buttons.

消除文献域代码格式

注意：一旦清除域代码，将无法统一修改参考文献。
清除域代码前请保留副本，以便日后能继续修改引文。

该选哪本来投?

选刊不当存在隐患

因研究内容“不适合本刊”，而被退稿或使稿件延迟数周或数月发表。

由于编辑和审稿人对作者研究领域的了解比较模糊，导致稿件受到质量参差不齐的同行评议。

不公正的同行评议

少有同行关注

埋没在一份同行很少问津的期刊中，达不到与同行交流的目的。也可能极少被人引用。

你以下的困惑是否有了思路?

•各种来源文献保存**杂乱无序**，无统一有效管理的位置，面对纷繁冗杂的文献，经常找不到有效的文献。

统一导入至Endnote，使用分组与检索功能进行梳理

•做课题或撰写论文时，我们需要对文献进行研读，或借鉴已有的文献进行分析，讨论。但因保存文献量较大，形式繁杂，感觉**无从下手**。

通过标记，分组，排序等功能来有序管理，快速找到所需文献

•写论文的时候，**参考文献格式处理**令人头疼不已，一不留神错误百出，在编辑参考文献格式上浪费大量时间精力，结果可能会被编辑质疑文章的质量。

边写作边引用，提高写作效率

•投稿时，对于**选哪本刊物**来投，纠结又迷茫不已。

使用Endnote投稿期刊匹配功能，获取投稿建议以及期刊信息

谢谢!
